

Announcement: Mazzei Injector Corporation

Mazzei Injector Corporation announces the merger of GDT Water Process Corporation of Phoenix, AZ, USA. GDT is a water treatment equipment company specializing in ozone treatment and VOC stripping applications using patented pressurized dissolution and degassing technology in the industrial and municipal water arena. GDT will become a division of Mazzei Injector Corp. and will continue to offer its patented systems and processes along with its engineering expertise under the Mazzei Injector banner.

The alliance of the two companies enables a more structured focus on core Mazzei Injector and GDT products and processes. Angelo Mazzei, President of Mazzei Injector Corporation states, "This synergistic approach utilizes the combination of talents, strengths, and capabilities of both businesses to expand the manufacturing, distribution, and sales of our proprietary technologies.

Mazzei Injector Corp. has strong product development and manufacturing capabilities along with worldwide distribution and GDT has demonstrated the ability to bring new products and processes to market effectively. GDT will be assisting in the sales and marketing effort for all products.

We anticipate our new concentration of technologies, expertise, vision, marketing, and distribution will create an even more productive force with increased internal efficiencies."

Mazzei Injector Corporation, established in 1978, designs, manufactures, and globally markets a diversified line of high efficiency venturi injectors, nozzles, and proprietary application processes. Mazzei holds several US and International patents covering both application and product. The combined operations will be conducted from the Mazzei offices in Bakersfield, California.
